WHAT IS MATH SMASH?

Math Smash: Card Adventure is a roguelike card game designed to help children between 8 and 14 years old practice math in a fun and strategic way.

The player chooses a character, enters a map, and explores different worlds filled with enemies, chests, and rewards. Each run feels different because the paths, enemies, and events can change every time.

The main idea is to turn math learning into an adventure experience, where solving operations does not feel like homework, but like an important part of combat.

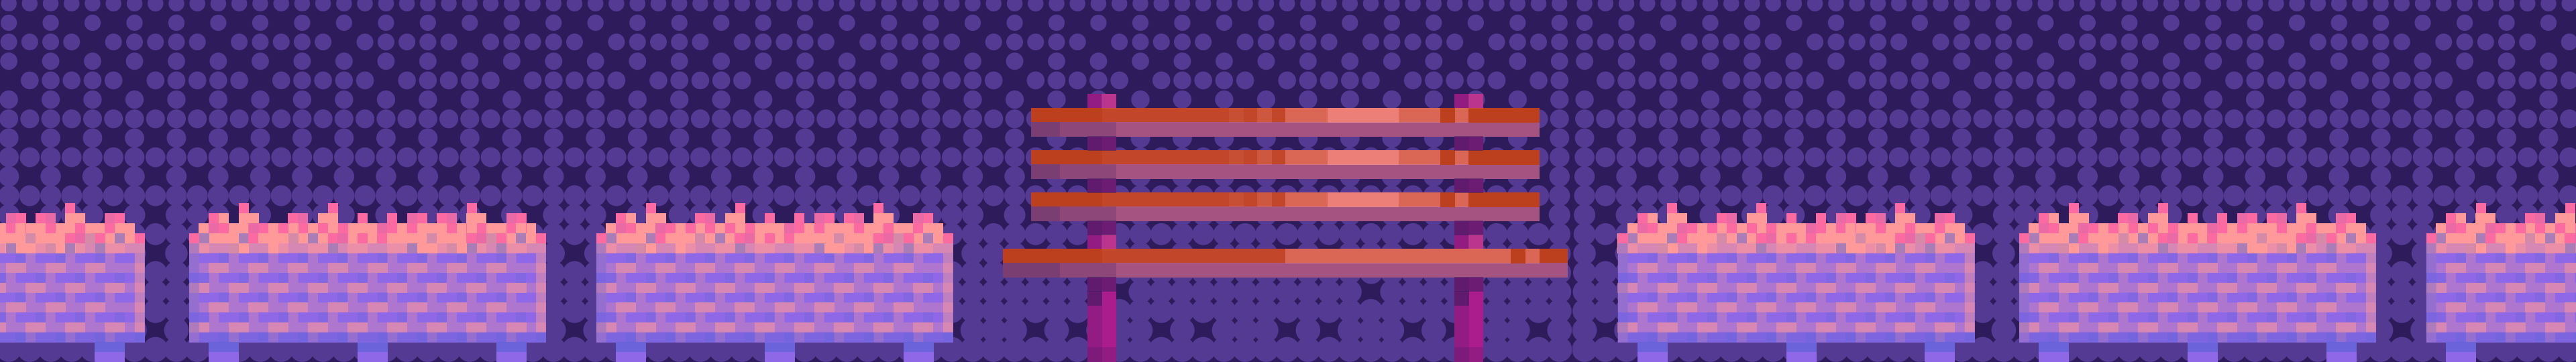

GAMEPLAY

The gameplay combines strategy, speed, and problem-solving. Before each battle, the player builds a deck with attack, defense, and special skill cards. To activate a card, the player must solve a math operation before the timer runs out.

If the answer is correct and fast, the card has a stronger effect. If the player takes too long or answers incorrectly, the effect is reduced or fails. As the player progresses, the maps become more difficult: first addition and subtraction, then multiplication and division, and finally mixed operations.

What makes the game engaging is that it combines education with action: the player learns, makes decisions, unlocks cards, and improves their strategy while playing.
